INK

Unsafe tattoos put you at risk of  
HEPATITIS B | HEPATITIS C | HIV

## When you get a tattoo use this checklist:

- ✓ *Artist is wearing gloves*
- ✓ *A new razor is used (if they use one)*
- ✓ *Needle is opened in front of you (so you know that it's new)*
- ✓ *Disposable ink wells are used*

**AUSTRALIAN TATTOO STUDIOS** HAVE MANY REGULATIONS THAT KEEP CUSTOMERS SAFE FROM BLOOD-BORNE VIRUSES . *If you get a tattoo done anywhere but a registered parlour in Australia they may not abide by the same regulations, so there can be a much higher risk of BBV infection.*
